

Eight Weeks of High-Intensity Interval Static Strength Training Improves Skeletal Muscle Atrophy and Motor Function in Aged Rats via the PGC-1 α /FNDC5/UCPI Pathway [Corrigendum]

Liu Y, Guo C, Liu S, Zhang S, Mao Y, Fang L. *Clin Interv Aging*. 2021;16:811–821. The authors apologize for this error.

The authors have advised there is an error in the author list on page 811. The author name “Yun Mao” should read “Yun Miao”.

Publish your work in this journal

Clinical Interventions in Aging is an international, peer-reviewed journal focusing on evidence-based reports on the value or lack thereof of treatments intended to prevent or delay the onset of maladaptive correlates of aging in human beings. This journal is indexed on PubMed Central, MedLine, CAS, Scopus and the Elsevier

Bibliographic databases. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
