

Alginate/Gelatin Hydrogel Scaffold Containing nCeO₂ as a Potential Osteogenic Nanomaterial for Bone Tissue Engineering [Corrigendum]

Li F, Li J, Song X, et al. *Int J Nanomedicine*. 2022;17:6561-6578.

The authors have advised due to an error that occurred inadvertently at the time of figure assembly, Figure 4G on page 6571 is incorrect. The correct Figure 4 is as follows.

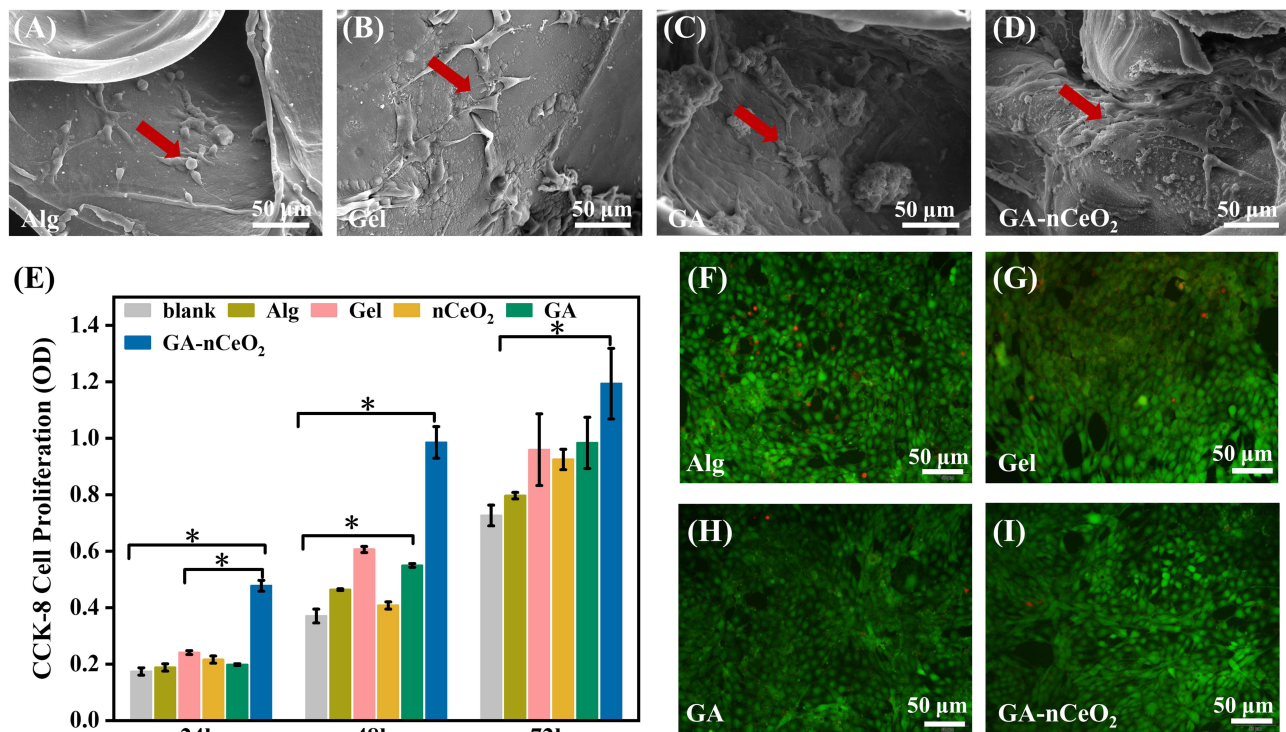

Figure 4 In vitro biocompatibility of MC3T3-E1 cells on the hydrogel scaffold: (A–D) the SEM images of MC3T3-E1 cells cultured on the Alg, Gel, GA, and GA-nCeO₂ hydrogel scaffold for 3 days (red arrows showed cells stretched by adhesion on hydrogels); (E) CCK-8 assay for cells cultured for 1, 2, and 3 days on Alg, Gel, GA, and GAnCeO₂ hydrogel scaffold; (F–I) Live and dead staining for cells on Alg, Gel, GA, and GA-nCeO₂ hydrogel scaffold at 3 days. Scale bar: 50 μm. The asterisks indicate a statistically significant difference from the groups (*p < 0.05).

The authors apologize for this error and advise it does not affect the results and conclusion of the paper.

International Journal of Nanomedicine**Dovepress****Publish your work in this journal**

The International Journal of Nanomedicine is an international, peer-reviewed journal focusing on the application of nanotechnology in diagnostics, therapeutics, and drug delivery systems throughout the biomedical field. This journal is indexed on PubMed Central, MedLine, CAS, SciSearch®, Current Contents®/Clinical Medicine, Journal Citation Reports/Science Edition, EMBase, Scopus and the Elsevier Bibliographic databases. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
