

Perioperative Clinical Results of Transcervical and Transhiatal Esophagectomy versus Thoracoscopic Esophagectomy in Patients with Esophageal Carcinoma: A Prospective, Randomized, Controlled Study [Corrigendum]

Yin Z, Yang RM, Jiang YQ, Chen Q, Cai HR. *Int J Gen Med.* 2022;15:3393–3404.

The authors have advised there is an error in the Patients section on page 3394 and [Figure 1](#) on page 3395, the age group 65-70 years old should be 65-75 years old.

Page 3394, Patients, second paragraph, first line, the text “Inclusion criteria: (1) 65-70 years old” should read “Inclusion criteria: (1) 65-75 years old”.

Page 3395, [Figure 1](#), first box, the text “b. 65-70 years old” should read “b. 65-75 years old”. The correct [Figure 1](#) is as follows.

The authors apologise for this error and advise it does not affect the results of the paper.

Figure I The flow chart for the trial.

Publish your work in this journal

The International Journal of General Medicine is an international, peer-reviewed open-access journal that focuses on general and internal medicine, pathogenesis, epidemiology, diagnosis, monitoring and treatment protocols. The journal is characterized by the rapid reporting of reviews, original research and clinical studies across all disease areas. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
