* Only associations meeting the criteria of P < 0.05, P-HEIDI > 0.01, and passing sensitivity analysis are presented

SMR, Summary data-level Mendelian randomization; OR, odds ratio; CI, confidence interval; FDR, false dicovery rate; HEIDI, heterogeneity in dependent instruments; SNP, single nucleotide polymorphsim;

Table S8. Sensitivity analysis of associations between PCD-related gene expression and asthma*

* Only associations meeting the criteria of P < 0.05, P-HEIDI > 0.01, and passing sensitivity analysis are presented

PCD, programmed cell death; SNP, single nucleotide polymorphsim; OR odds ratio; CI, confidence interval

Table S9. Genetic instruments for sensitivity analysis of PCD-related gene expression in relation to asthma

PCD, programmed cell death; QTL, quantitative trait loci; SNP, single nucleotide polymorphsim; PP, posterior probability; "→" indicates the direction of association between different QTL levels: mQTL → eQTL represents the relationship from mQTL to eQTL, and eQTL → pQTL represents the relationship from eQTL to pQTL.

* Only associations meeting the criteria of P < 0.05, P-HEIDI > 0.01, and passing sensitivity analysis are presented

PCD, programmed cell death; SMR, Summary data-level Mendelian randomization; COPD, chronic obstructive pulmonary disease; OR, odds ratio; CI, confidence interval; FDR, false dicovery rate; HEIDI, heterogeneity in dependent instruments; SNP, single nucleotide polymorphsim;

Table S19. Sensitivity analysis of associations between PCD-related gene methylation and COPD*
