

Table S1 The primers used for qRT-PCR.

Gene	Primer	Sequence (5'-3')
EGFL7	Forward	TGAATGCAGTGCTAGGAGGG
	Reverse	GCACACAGAGTGTACCGTCT
GAPDH	Forward	GGAGCGAGATCCCTCCAAAAT
	Reverse	GGCTGTTGTCATACTTCTCATGG

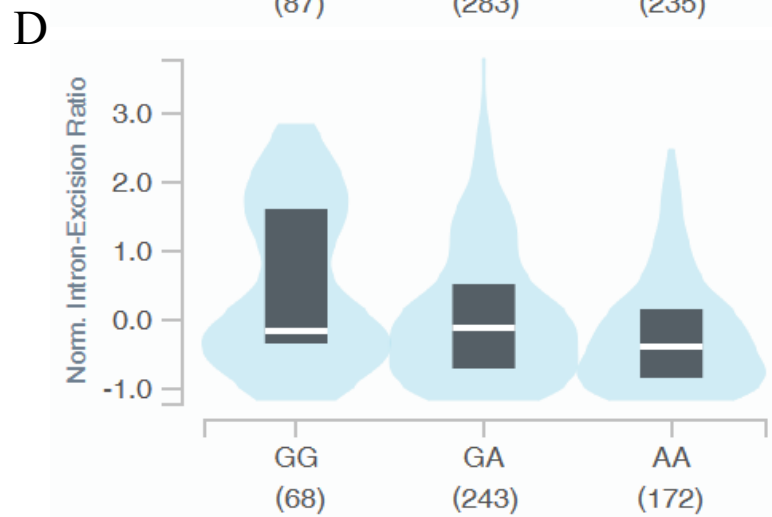

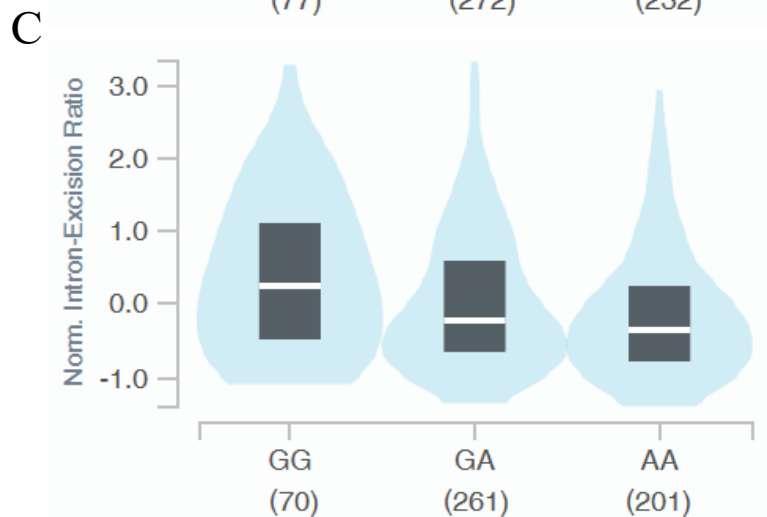

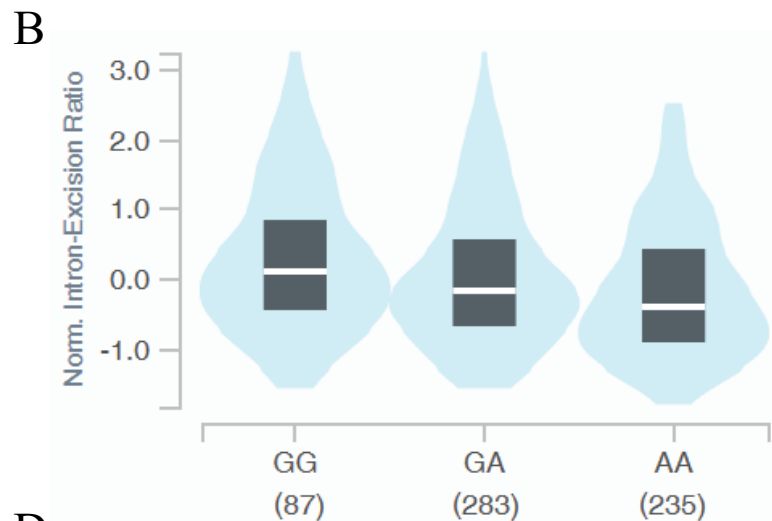

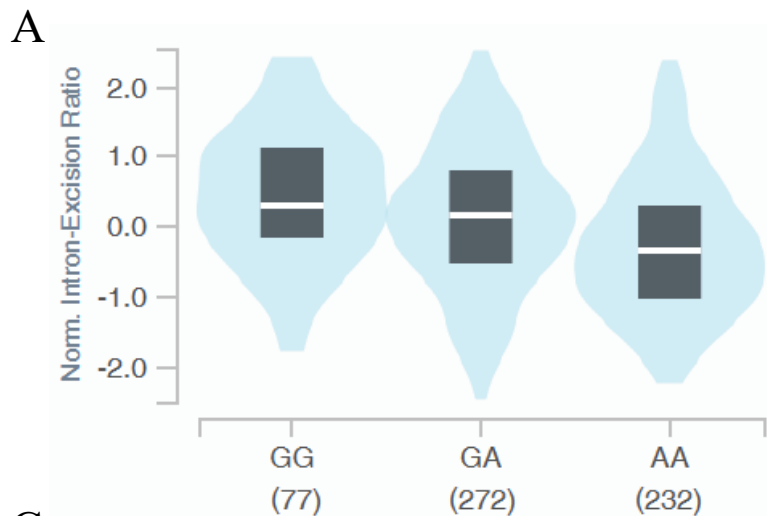

Figure S1 Analysis of EGFL7 single nucleotide polymorphisms and tissue-specific gene expression levels. The G/G genotype of rs9411260 correlated with decreased EGFL7 expression in adipose (A), skin (B), nerve tissues (C), and cultured fibroblasts (D).

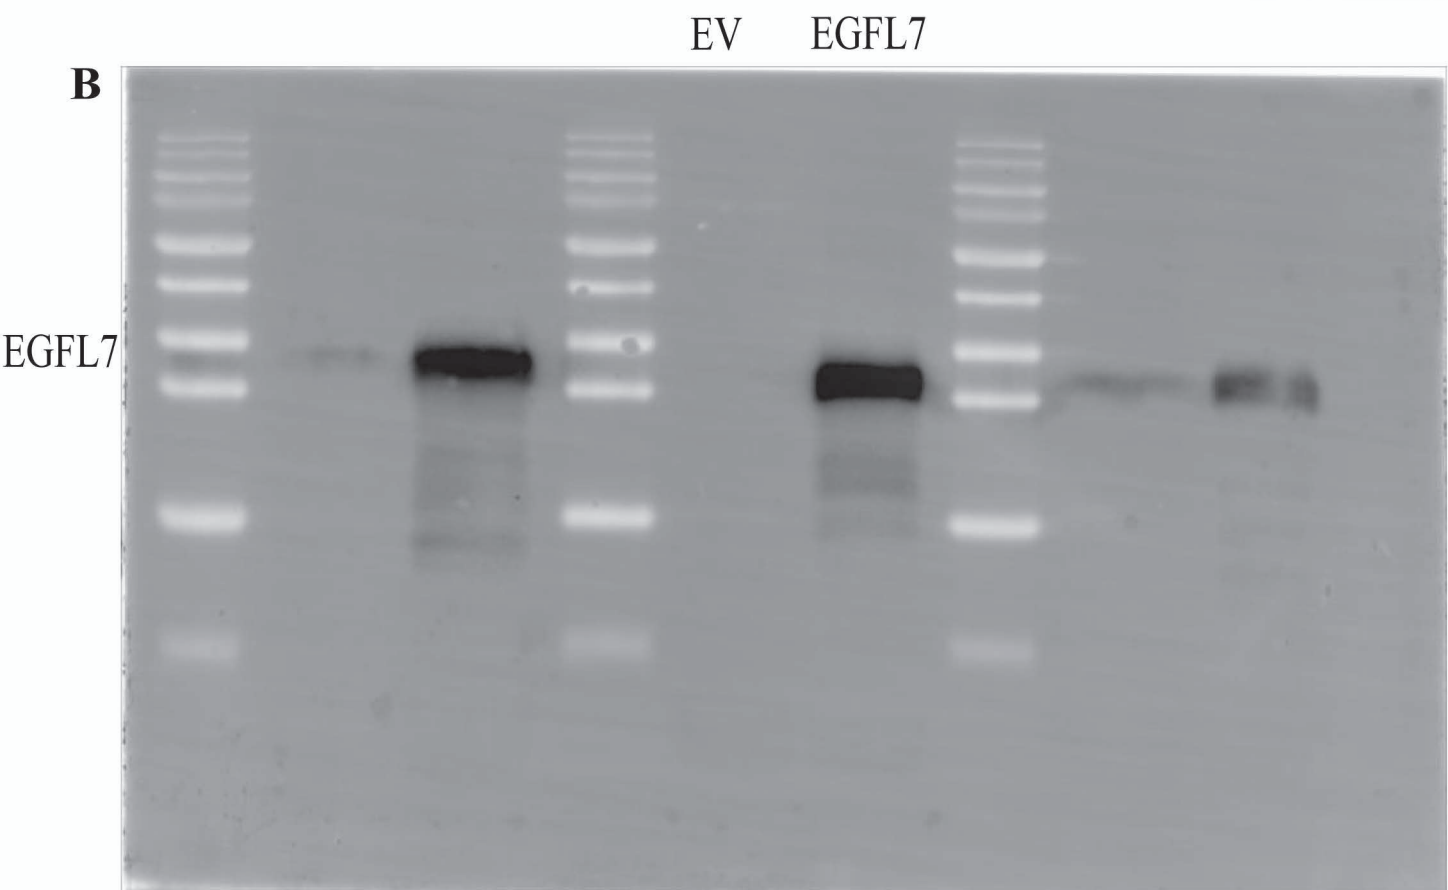

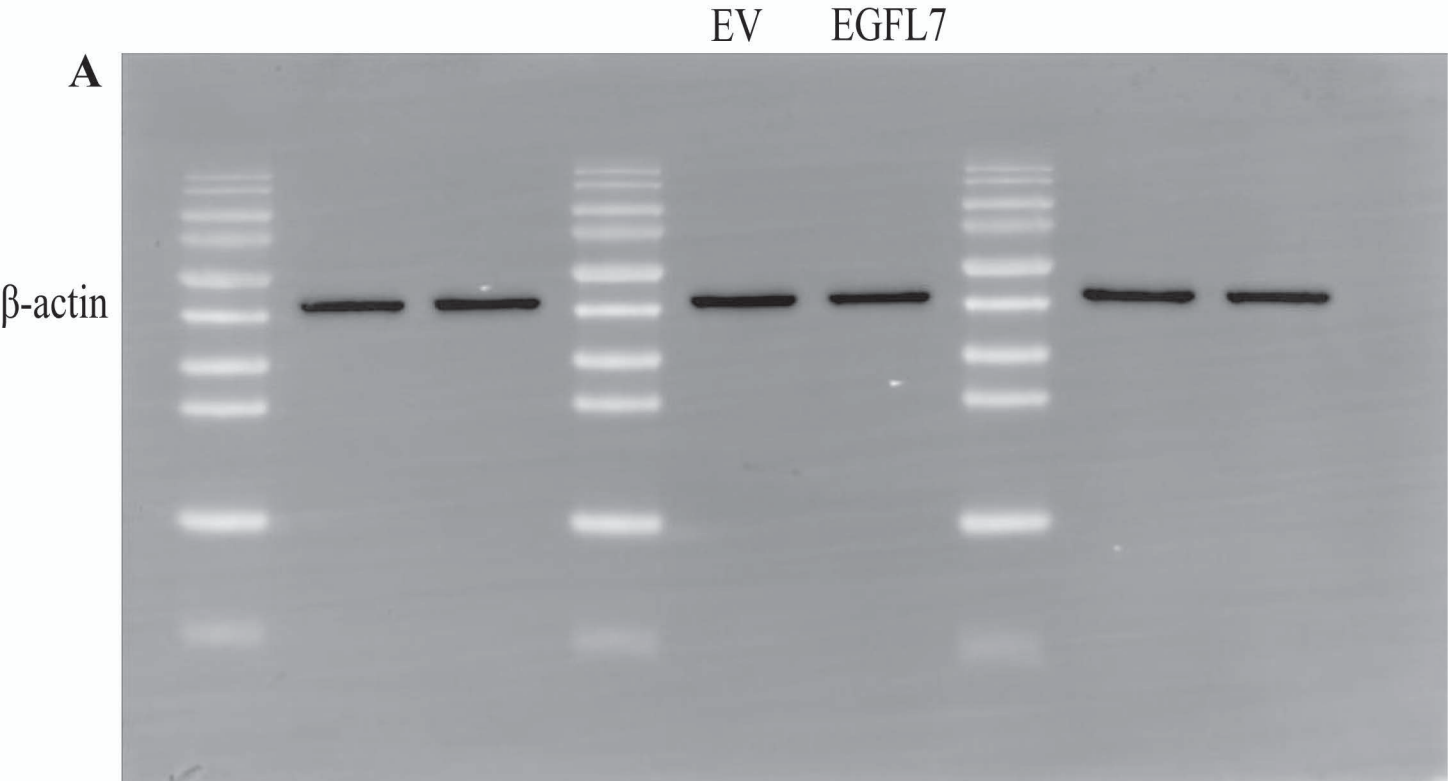

Figure S2 Expression levels of EGFL7 were validated through Western blotting. (A) Full-length blots of beta-actin. (B) Full-length blots of EGFL7.
