## **Figure legends**

**Supplemantary Figure 1.** A, YAP1 expressions in HBsAg (+) NPC (n=5) compared to HBsAg (-) NPC (n=65) by IHC analysis ( p=0.557).B and C,5-year progression-free survival and distant metastasis-free survival in high YAP1 expression compare to low YAP1 expression groups show no statistic significant (36.9% vs.50.6%, p=0.118,33.6% vs.50.6%, p=0.096, respectively. D, YAP1 expression has positive correlation with c-MYC expression ( r=0.556, p<0.001).

**Supplemantary Figure 2.**The ONCOMINE database (www.oncomine.com/nasophryngeal cancer) was used to analyze yap gene expression with clinical TNM staging. A, yap gene expression with clinical T staging; B, yap gene expression with clinical N staging.
