

Supplementary Figure-S1 Correlations of the CAF score with DDTC, thyroid differentiation score (TDS) and BRAF-RAS score. (A) Comparison analyses of the CAF score among normal thyroid (NT) tissues, PTCs and dedifferentiated thyroid cancers (DDTCs). (B) Predictive effects of the CAF score for low-TDS patients in PTC. (C) Linear correlations of the CAF score with TDS. (D) Linear correlations of the CAF score with BRAF-RAS score. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Supplementary Figure-S2 Correlations of the CAF score with genetic mutations and markers of tumor microenvironment based on the Wu CAF signature in thyroid cancer. (A) The DDTC patients from the GSE76039 cohort were ranked by histological subtypes, OS status, $BRAF^{V600E}$ mutation, $TERT$ promoter mutation and $TP53$ mutation based on the CAF scores. (B) The PTC patients from the TCGA cohort were ranked by $BRAF^{V600E}$ mutation, RAS mutation, BRAF-RAS score and thyroid differentiation score (TDS) based on the CAF scores. (C) The DDTC patients were ranked by the CAF score, histopathological subtypes, immune checkpoint markers and activated tumor-associated macrophage markers. (D) The PTC patients were ranked by the CAF score, immune checkpoint markers and activated tumor-associated macrophage markers. Spearman's correlation was performed to analyse the linear correlation of the CAF score with expression value of immune microenvironment markers. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Supplementary Figure-S3 Correlations of the CAF score with genetic mutations and markers of tumor microenvironment based on the Nurmik CAF signature in thyroid cancer. (A) The DDTc patients from the GSE76039 cohort were ranked by histological subtypes, OS status, *BRAF*^{V600E} mutation, *TERT* promoter mutation and *TP53* mutation based on the CAF score. (B) The PTC patients from the TCGA cohort were ranked by *BRAF*^{V600E} mutation, *RAS* mutation, BRAF-RAS score and thyroid differentiation score (TDS) based on the CAF score. (C) The DDTc patients were ranked by the CAF score, histopathological subtypes, immune checkpoint markers and activated tumor-associated macrophage markers. (D) The PTC patients were ranked by the CAF score, immune checkpoint markers and activated tumor-associated macrophage markers. Spearman's correlation was performed to analyse the linear correlation of the CAF score with expression value of immune microenvironment markers. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.
