Suppl. Table 3 TRPV1 lineage gene list

Table S3: Highly Differentially Expressed Transcripts in the TRPV1_L Preparation

This table contains the molecular signature of TRPV1_L neurons based on level of expression. The table lists all 263 TRPV1_L functionally well annotated transcripts with a differential of 5X and above (there is partial overlap with Table 1). The genes have been grouped into functional categories according to known annotations and publications. Within the groups, the genes have been sorted on expression (high to low) and only genes with an expression level above 1 RPKM are included. The adjusted fold change values are color coded: Red: >20 fold, Blue: 2-10 fold, and Green: < 10 fold difference. The accession id provides the exact reference to the gene isoform analyzed within this study.
