

Figure S1. (A) The dendrogram of PFGE patterns of . (B) Plasmid profiles of parental and plasmid-curing isolates generated using the restriction enzyme S1, with *Salmonella enterica* serovar Branderup as the molecular mass marker. (C). Southern blot hybridization with a *mcr-I*-specific probe. The MCR-F1 (5'-TGCAGCATACTTCTGTGTGGT-3') and MCR-R1 (5'-CACCG-AGTAGATTGGCATGA-3') primers were used.
