

Supplementary Figure legends

Supplementary Figure 1 Expression of NAMPT and INSR β in renal tissues of healthy controls and DKD patients. Representative immunohistochemical analysis of NAMPT and INSR β staining in healthy controls and DKD patients. Brown staining indicates the protein expression of NAMPT and INSR. Scale bar=50 μ m; The top two arrows indicate significantly increased expression of NAMPT in the renal tubulointerstitium of DKD patients, and the bottom two arrows indicate increased expression of INSR- β in the renal innate cells of DKD patients.

Supplementary Figure 1
