

Supplementary Material 1: uncropped Western blots (Figure 2)

Figure 2

(A) Submitted Figure 2A

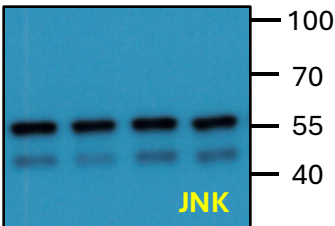

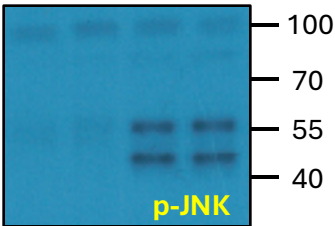

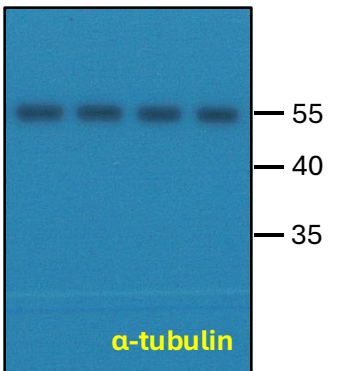

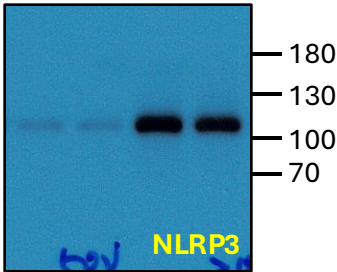

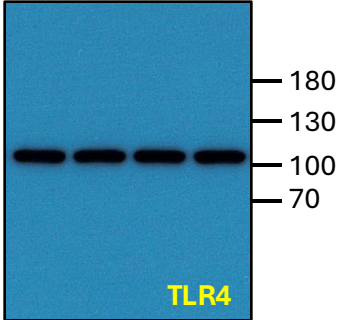

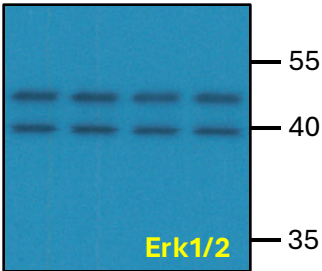

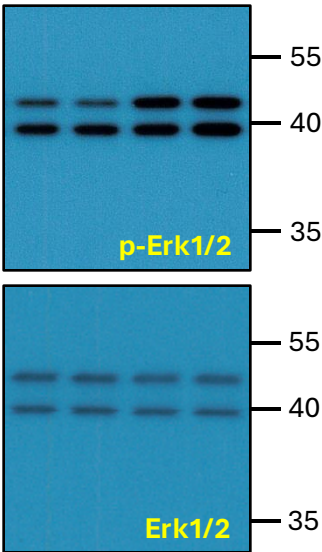

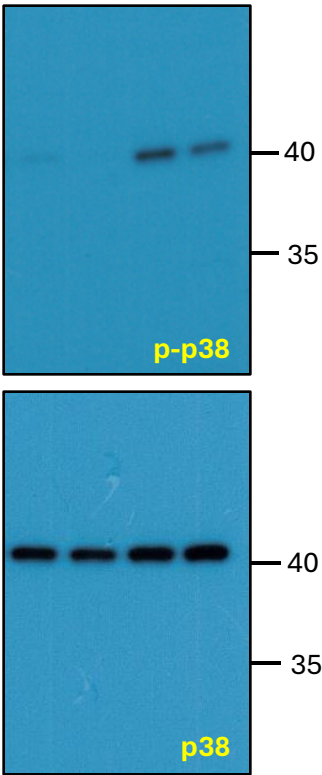

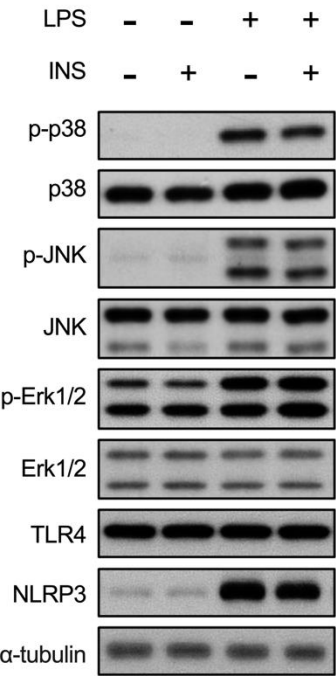

Note: Images displayed within the identical column were derived from the same membrane through the process of stripping and re-probing (arranged from top to bottom). The numerical values denote the molecular weights of protein ladders.

Supplementary Material 2: uncropped Western blots (Figure 3)

Figure 3

(A) Submitted Figure 3A

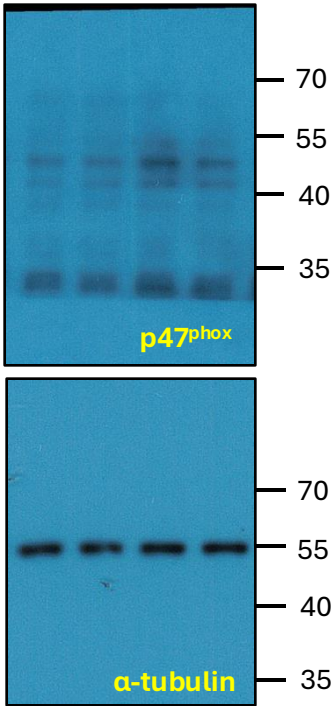

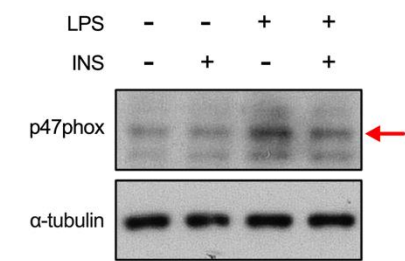

Note: Images displayed within the identical column were derived from the same membrane through the process of stripping and re-probing (arranged from top to bottom). The numerical values denote the molecular weights of protein ladders.

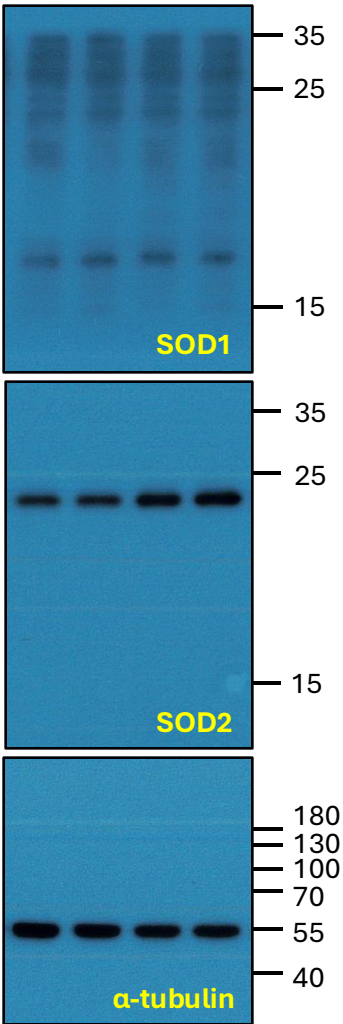

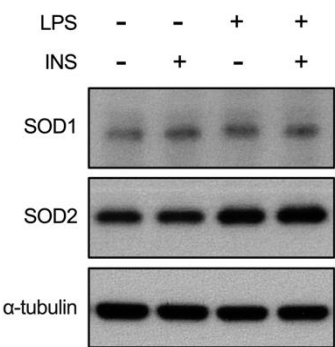

Supplementary Material 3: uncropped Western blots (Figure 5)

Figure 5

(C) Submitted Figure 5C

(E) Submitted Figure 5E

Note: Images displayed within the identical column were derived from the same membrane through the process of stripping and re-probing (arranged from top to bottom). The numerical values denote the molecular weights of protein ladders.
