Integrative review

Models and practices of integrated acute geriatric care incorporating complementary and integrative medicine: a protocol for an integrative review

1 Questions de recherche

Conduct an integrative review of studies on IAGC (integrative acute geriatric care) models and practices in geriatric, psychogeriatric, internal medicine and rehabilitation units, including different types of CIM (complementary and integrative medicine) and their efficiency, effectiveness and implementation.

- 1) What models and practices of IAGC are used in geriatrics, psychogeriatrics, internal medicine and rehabilitation units for older adult inpatients with physical or mental illnesses?
- 2) How is IAGC integrated into local and regional community care?
- 3) How are patient and family preferences integrated into the IAGC and wellness processes?
- 4) What types of CIM are used or prescribed and which dimensions of wellness are emphasised in older adults' personalised therapeutic or care plans at discharge as parts of IAGC models?

Table S1: Critical appraisal results of the studies included in our review using the Newcastle–Ottawa Scale (NOS), as adapted for cohort studies and cross-sectional studies (1).

Study	Selection				Comparability		Outcome			Total quality score	
	Cohort Studies										
	Representativeness of exposed cohort	Selection of non-exposed cohort	Ascertainment of exposure	Demonstration that outcome of interest was not present at start of study	Adjust for the most important risk factors	Adjust for other risk factors	Assessment of outcome	Follow-up length	Loss to follow-up rate		
Norman & Sinha (39)	1 *	1 *	1 *	1 *	0 *	0 *	1 *	1 *	1 *	7 *	
Pineiro-Fernandez et al. (42)	1 *	1 *	1 *	1 *	0 *	0 *	1 *	1 *	1 *	7 *	
Tay et al. (53)	1 *	1 *	1 *	1 *	1 *	1 *	1 *	1 *	0 *	8 *	
Flood et al. (64)	1 *	1 *	1 *	1 *	1 *	1 *	1 *	1 *	1 *	9 *	
Hung et al. (65)	1 *	1 *	1 *	1 *	1 *	1 *	1 *	1 *	1 *	9 *	
Study	Cross-sectional Studies										
	Representativeness of the sample	Sample size	Response rate	Ascertainment of the exposure	Control for the most important factor	Control for any additional factor	Assessment of outcome	Statistical test		Total quality score	
Peytremann-Bridevaux et al. (44)	0 *	1 *	1 *	2 *	1 *	0 *	1 *	0 *		6 *	
Schusselfillietaz et al. (56)	1 *	1 *	1 *	1 *	0 *	0 *	1 *	0 *		5 *	
Alvarez et al. (61)	1 *	1 *	0 *	0 *	0 *	0 *	2 *	0 *		4 *	
Weaver & Gavin (62)	1 *	1 *	0 *	0 *	0 *	0 *	2 *	0 *		4 *	

Note: A study could be awarded a maximum of one star for each numbered item in the Selection and Outcome categories; a maximum of two stars could be given for Comparability. Studies were evaluated on a scale from 0 to 9 stars and classified into groups of low (< 6 stars), moderate (6–7 stars), or high (8–9 stars) quality. X* = X star.

Table S2. Critical appraisal results of the studies included in our review using the RoB 2.0: Revised Cochrane risk of bias tool for randomised trials—randomised trial methodologies (31).

Study	Randomisation Process	Intended Interventions		Missing outcome data	Measurement of the outcome	Selection of the reported result
		Effect of assignment to intervention	Effect of adhering to intervention			
Lee et al. (37)	Low risk of bias	Low risk of bias	Low risk of bias	Some concerns	Some concerns	Some concerns
Low et al. (58)	Low risk of bias	Some concerns	Some concerns	Some concerns	Low risk of bias	Some concerns
Buurman et al. (60)	Low risk of bias	Low risk of bias	Low risk of bias	Some concerns	Low risk of bias	Some concerns
Barnes et al. (66)	Low risk of bias	High risk of bias	High risk of bias	High risk of bias	Some concerns	Some concerns

Table S3. Critical appraisal results of the studies included in our review using the ROBINS-I: The Risk Of Bias In Non-randomised Studies of Interventions assessment tool (32).

Study	Pre-Intervention		At Intervention	Post-Intervention				
	Confounding	Selection of participants	Classification of the intervention	Intended interventions		Missing outcome data	Measurement of the outcome	Selection of the reported result
				Effect of assignment to intervention	Effect of starting and adhering to intervention			
Ha et al. (46)	No information	Serious risk of bias	Serious risk of bias	No information	No information	No information	Moderate risk of bias	Moderate risk of bias
Booth et al. (47)	No information	Serious risk of bias	Moderate risk of bias	No information	No information	No information	Serious risk of bias	Serious risk of bias
Kripalani et al. (48)	Moderate risk of bias	Moderate risk of bias	Low risk of bias	Low risk of bias	Low risk of bias	Moderate risk of bias	Low risk of bias	Moderate risk of bias

Table S4. Critical appraisal results of the studies included in our review using the Mixed Methods Appraisal Tool (MMAT) (33).

Study	Category of study designs						
	Screening questions		Mixed methods – Methodological quality criteria				
	S1. Are there clear research questions?	S2. Do the collected data allow the research questions to be addressed?	5.1. Is there an adequate rationale for using a mixed-methods design to address the research question?	5.2. Are the different components of the study effectively integrated to answer the research question?	5.3. Are the outputs of the integration of qualitative and quantitative components adequately interpreted?	5.4. Are divergences and inconsistencies between quantitative and qualitative results adequately addressed?	5.5. Do the different components of the study adhere to the quality criteria of each tradition of the methods involved?
Sumner et al. (36)	Yes	Yes	Yes	Yes	Yes	Cannot tell	Yes
Naylor et al. (54)	Yes	Yes	Yes	Yes	Yes	Cannot tell	Yes

Table S5. Critical appraisal results of the studies included in our review using the JBI Critical Appraisal Tools for qualitative research and case reports (34).

Study	Appraisal questions
