Pharmacological Inhibition of Necroptosis Promotes Human Breast Cancer Cell Proliferation and Metastasis [Retraction]

We, the Editor and Publisher of the journal *OncoTargets and Therapy* have retracted the published article.

Following publication of the article, the authors raised concerns about the duplication of images from Figures 5 and 6. Specifically,

- The images for Figure 5B, Veh and Nec-1, 0h, have been duplicated.
- The images for Figure 6A and 6B, MCF-7, Nec-1, have been duplicated.

The authors were cooperative and were able to provide some original data for the study but were unable to provide a satisfactory explanation for how the images came to be duplicated. As verifying the validity of published work is core to the integrity of the scholarly record, the Publisher and Editor requested to retract the article and the authors do not agree with this decision.

We have been informed in our decision-making by our editorial policies and COPE guidelines.

The retracted article will remain online to maintain the scholarly record, but it will be digitally watermarked on each page as “Retracted”.

---

**OncoTargets and Therapy**

*Publish your work in this journal*

*OncoTargets and Therapy* is an international, peer-reviewed, open access journal focusing on the pathological basis of all cancers, potential targets for therapy and treatment protocols employed to improve the management of cancer patients. The journal also focuses on the impact of management programs and new therapeutic agents and protocols on patient perspectives such as quality of life, adherence and satisfaction. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit http://www.dovepress.com/testimonials.php to read real quotes from published authors.
