# Importance of acute renal failure with ibuprofen

Fatih Tufan

Sevket Yilmaz Training and Research Hospital, Geriatrics Unit, Yildirim, Bursa, Turkey

### **Dear editor**

Kuptniratsaikul et al report the efficacy of Curcuma domestica extracts in the treatment of knee osteoarthritis.<sup>1</sup> One of my concerns about this well designed study is lack of one important adverse event assessment. One of the most important adverse effects of ibuprofen, which is a non-selective non-steroid anti-inflammatory drug, is acute renal failure.<sup>2</sup> Although one of the exclusion criteria in this study is renal failure, especially in the elderly population, it is crucial to follow up kidney functions under non-steroid anti-inflammatory treatment.

# **Dear editor**

We thank Professor Tufan very much for the valuable comment regarding the study entitled "Efficacy and safety of Curcuma domestica extracts compared to ibuprofen in patients with knee osteoarthritis: a multicenter study", published in *Clinical Interventions in Aging*.<sup>1</sup> His concern is about acute renal failure in aging patients receiving non-steroidal anti-inflammatory drugs, especially ibuprofen. We were also concerned about this, therefore one of our exclusion criteria was abnormal renal function.<sup>1</sup> In addition, every patient had blood chemistry tests (complete blood count, liver function [serum glutamic oxaloacetic transaminase, serum glutamic pyruvic transaminase] and renal function [blood urea nitrogen, creatinine]) at week 0 and week 4 (at the end of the study). The results of the blood chemistry tests of both groups were compared before and after the study (presented in Table 3 in our original paper).<sup>1</sup> There were no differences between blood urea nitrogen and creatinine within each group. Additionally, no one developed acute renal failure during the study.

#### Publish your work in this journal

Clinical Interventions in Aging is an international, peer-reviewed journal focusing on evidence-based reports on the value or lack thereof of treatments intended to prevent or delay the onset of maladaptive correlates of aging in human beings. This journal is indexed on PubMed Central, MedLine,

CAS, Scopus and the Elsevier Bibliographic databases. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit http://www.dovepress. com/testimonials.php to read real quotes from published authors.
