New product development with the innovative biomolecular sublingual immunotherapy formulations for the management of allergic rhinitis [Corrigendum]

On page 223, Figure 1 should be replaced with the revised version shown below:

On page 224, line 4 in the left column, “many” should be replaced with “all”.

On page 224, line 7 in the left column, “but only the major allergen Phl p 5 is measured in μg” should be replaced with “such as group 1 and group 5 allergens (Figure 1, Table 2)”.

On page 224, line 9 in the left column, the reference to “(Figure 1)” should be removed.

The contribution of all allergens is assessed by total allergenic activity

Group 1 allergens are quantified by mass spectrometry in the In-House Reference Preparation

Group 5 allergens are quantified by ELISA in the In-House Reference Preparation

Figure 1: The molecular profile of Staloral biomolecular grasses.
