

Morning and evening efficacy evaluation of rupatadine (10 and 20 mg), compared with cetirizine 10 mg in perennial allergic rhinitis: a randomized, double-blind, placebo-controlled trial [Corrigendum]

Marmouz F, Giralt J, Izquierdo I. *Journal of Asthma and Allergy*. 2011;4:27–35.

On page 30, Table 1 was incorrect. The corrected table is shown below.

Table 1 Demographic and clinical characteristics at baseline in ITT population

Variable	Placebo	Rupatadine	Rupatadine	Cetirizine
	10 mg	10 mg	20 mg	10 mg
	(n=70)	(n=65)	(n=68)	(n=66)
Gender (male%)	27 (38)	18 (27)	26 (37)	28 (41)
Age (years)	30.9	31.4	33.8	32.2
Race (caucasian%)	69 (97)	65 (100)	68 (100)	63 (92)
5TSS mean value	8.80	8.75	8.10	8.39
4NTSS mean value	7.67	7.38	7.07	7.23

Notes: 5TSS: total symptoms score was calculated by adding the 5 symptom scores: rhinorrhea, sneezing, nasal itching, nasal obstruction, and conjunctival itching; 4NTSS: total nasal symptoms score was calculated by adding the 4 symptom scores: rhinorrhea, sneezing, nasal itching, and nasal obstruction. No significant differences were found between treatment groups.

On page 31, Tables 2 and 3 were incorrect. The corrected tables are shown below.
