Targeted delivery of reduced graphene oxide nanosheets using multifunctional ultrasound nanobubbles for visual and enhanced photothermal therapy [Corrigendum]

Liu Z, Zhang J, Tian Y, Zhang L, Han X, Wang Q, Cheng W.
Int J Nanomedicine. 2018;13:7859–7872.

Page 7864, Figure 2G, the incorrect image has been used, the correct figure is shown below.

Figure 2 Characterization of nanobubbles, proof the chains are conjugated together.

Notes: Bar in **A–C** is 10 μm , inset in Figure 2A, bar=100 nm, bar in **G** and **H**=4 μm , bar in **I**=0.6 μm . **(A)** Nanobubbles (NBs) in suspension were milk white in color. Pure NB solution was observed under a light microscope (magnification, 1,000 $\times$). **(B)** Avidinylated nanobubbles were observed under a light microscope (magnification, 1,000 $\times$). **(C)** Nanobubbles conjugated with FITC-labeled avidin under fluorescence microscopy (magnification, 1,000 $\times$). The surface of nanobubbles appeared green under fluorescence microscopy, indicating that FITC-labeled avidin was packaged on the NB surface. **(D)** Fourier transform infrared (FTIR) spectra of graphene oxide-polyethylene glycol (GO-PEG) and reduced graphene oxide (rGO)-PEG. The GO-PEG and rGO-PEG sample was filtered over three times through a 100 kDa molecular weight cutoff (MWCO) filter to completely remove any unconjugated PEG (10 kDa). **(E)** AUV-vis-near-infrared (NIR) spectrum of nano-rGO-PEG-GPC3-Cy7 and free Cy7 dye solution. **(F)** Binding efficiency of biotinylated FITC-labeled rGO-PEG-GPC3 with avidinylated NBs was determined by flow cytometry. Comparison of the fluorescence intensities for NBs (black line, control) and FITC-labeled NBs-GPC3-rGO (red line) implies successful binding of rGO-PEG-GPC3 with avidinylated NBs. **(G)** Scanning electron microscopy revealed normal surface morphology of the Hep G2 cells (4,000 $\times$). Under scanning electron microscopy, targeted NBs-GPC3-rGO were clustered on the surface of the Hep G2 cells (**H** and **I**, 4,000 $\times$ and 10,000 $\times$, respectively).

Abbreviation: GPC3, heparin sulfate proteoglycan glypican-3.

International Journal of Nanomedicine**Dovepress****Publish your work in this journal**

The International Journal of Nanomedicine is an international, peer-reviewed journal focusing on the application of nanotechnology in diagnostics, therapeutics, and drug delivery systems throughout the biomedical field. This journal is indexed on PubMed Central, MedLine, CAS, SciSearch®, Current Contents®/Clinical Medicine,

Journal Citation Reports/Science Edition, EMBase, Scopus and the Elsevier Bibliographic databases. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.

Submit your manuscript here: <http://www.dovepress.com/international-journal-of-nanomedicine-journal>
