

## Identification of potential key genes associated with ovarian clear cell carcinoma [Retraction]

Xu Y, Shen K. Identification of potential key genes associated with ovarian clear cell carcinoma. *Cancer Management and Research*. 2018;10;5461–5470.

At the request of the author, the Editor-in-Chief and Publisher of *Cancer Management and Research* wish to retract the published article.

On review of their data the authors noted the western blot images shown in Figure 5A for proteins EPCAM and GATA6 of the published article were double banded. In published articles describing similar experimental conditions for EPCAM and GATA6 protein

levels the authors observed the reported western blot bands were always only single banded. To investigate, the authors repeated the western blot experiments several times and while they were able to report single bands for EPCAM and GATA6 proteins, they were unable to reproduce the same results described in the published article. As the conclusions of the article can no longer be supported the authors wish to retract their article.

Our decision-making was informed by our policy on publishing ethics and integrity and COPE's retraction guidelines. The authors wish to apologize for this error.

## Cancer Management and Research

Dovepress

### Publish your work in this journal

Cancer Management and Research is an international, peer-reviewed open access journal focusing on cancer research and the optimal use of preventative and integrated treatment interventions to achieve improved outcomes, enhanced survival and quality of life for the cancer patient.

The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
