

CORRIGENDUM

Painful tumors of the skin: “CALM HOG FLED PEN AND GETS BACK” [Corrigendum]

Cohen PR, Erickson CP, Calame A. *Clin Cosmet Investig Dermatol*. 2019;12:123–132.

On page 123, Abstract section, line 7, “Based on our clinical experience and review of the literature, 25 painful skin tumors were identified: chondrodermatitis nodularis helices, angioendotheliomatosis, leiomyoma, metastases, hidradenoma, osteoma cutis, glomus tumor, fibromyxoma, leiomyosarcoma, eccrine angiomatous hamartoma, Dercum’s disease, peizogenic pedal papule, neurilemmoma, angioliipoma, neuroma, dermatofibroma, granular cell tumor, endometriosis, thrombus, scar, blue rubber bleb nevus, angioma, calcinosis cutis, and keloid.” should read “Based on our clinical experience and review of the literature, 25 painful skin tumors were identified: chondrodermatitis nodularis helices, angioendotheliomatosis, leiomyoma, metastases, hidradenoma, osteoma cutis, glomus tumor, fibromyxoma, leiomyosarcoma, eccrine angiomatous hamartoma, Dercum’s disease, peizogenic pedal papule, eccrine spiradenoma, neurilemmoma, angioliipoma, neuroma, dermatofibroma, granular cell tumor, endometriosis, thrombus, scar, blue rubber bleb nevus, angioma, calcinosis cutis, and keloid.”

On page 131, Conclusion section, line 8, “Based on our clinical experience and review of the literature, 25 painful

skin tumors were identified: chondrodermatitis nodularis helices, angioendotheliomatosis, leiomyoma, metastases, hidradenoma, osteoma cutis, glomus tumor, fibromyxoma, leiomyosarcoma, eccrine angiomatous hamartoma, Dercum’s disease, peizogenic pedal papule, eccrine spiradenoma, neurilemmoma, angioliipoma, neuroma, dermatofibroma, granular cell tumor, endometriosis, thrombus, scar, blue rubber bleb nevus, angioma, calcinosis cutis, and keloid.” should read “Based on our clinical experience and review of the literature, 25 painful skin tumors were identified: chondrodermatitis nodularis helices, angioendotheliomatosis, leiomyoma, metastases, hidradenoma, osteoma cutis, glomus tumor, fibromyxoma, leiomyosarcoma, eccrine angiomatous hamartoma, Dercum’s disease, peizogenic pedal papule, eccrine spiradenoma, neurilemmoma, angioliipoma, neuroma, dermatofibroma, granular cell tumor, endometriosis, thrombus, scar, blue rubber bleb nevus, angioma, calcinosis cutis, and keloid.”

Following a review of our data post-publication, we found “eccrine spiradenoma” was accidentally omitted from the 25 painful skin tumors in the “Abstract” and “Conclusion” sections. The authors apologize for this oversight.

Publish your work in this journal

Clinical, Cosmetic and Investigational Dermatology is an international, peer-reviewed, open access, online journal that focuses on the latest clinical and experimental research in all aspects of skin disease and cosmetic interventions. This journal is indexed on CAS.

Submit your manuscript here: <https://www.dovepress.com/clinical-cosmetic-and-investigational-dermatology-journal>

The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
