

Long non-coding RNA NAP1L6 promotes tumor progression and predicts poor prognosis in prostate cancer by targeting Inhibin- β A [Corrigendum]

Zheng Y, Gao Y, Li X, et al. *Onco Targets Ther.* 2018;11:4965–4977.

On page 4972, the authors found an error in which the images for Figure 4A PC3 Blank and Figure 4B 22RV1 Blank were mistakenly duplicated. Upon realising the error, the authors repeated the knockdown experiment described in Figure 4 and were able to show results consistent with those described in the original article. The authors provided a description of the experiment

procedure used for the relative colony counts and the raw data from both the original and repeated experiments used to generate the results shown in Figure 4A and Figure 4B. See revised Figure 4 below.

The authors and the editor have confirmed that the correction of the images has no significant impact on the conclusions of the study.

The authors wish to apologise for this error.

OncoTargets and Therapy**Dovepress****Publish your work in this journal**

OncoTargets and Therapy is an international, peer-reviewed, open access journal focusing on the pathological basis of all cancers, potential targets for therapy and treatment protocols employed to improve the management of cancer patients. The journal also focuses on the impact of management programs and new therapeutic

agents and protocols on patient perspectives such as quality of life, adherence and satisfaction. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
