RETRACTION

Long Noncoding RNA LINC00511 Promotes Cell Growth And Invasion In Triple-Negative Breast Cancer By Interacting With Snail [Retraction]

The Editor-in-Chief and Publisher of Cancer Management and Research wish to retract the published article.

Following publication of the present article, the corresponding authors, Jianglong Huang and Mingjun Bai, submitted a new article to the journal OncoTargets and Therapy. During routine integrity checks it was found nearly all the text, results and figures of the new submission were identical to those of the previously published article. The only significant difference was the long noncoding RNA LINC00511 sequence, described in the published article, had been replaced with the long noncoding RNA LINC02474 sequence. Concerns were raised immediately to the Editor-in-Chief of Cancer Management and Research about the integrity of the published article.

As part of our investigation the authors were contacted but failed to provide a satisfactory explanation and were unable to provide the raw data for their study. It was also found there were unacceptable levels of similarity between the published article and several other articles reporting cancer studies involving long noncoding RNA sequences. The authors department at the Third Affiliated Hospital, Sun Yat-sen University was contacted and also shared our concerns regarding the validity of this study.

The Editor-in-Chief determined there were strong doubts regarding the validity of the data and findings in the published article.

Our decision-making was informed by our policy on publishing ethics and integrity and the COPE guidelines on retractions.

The retracted article will remain online to maintain the scholarly record, but it will be digitally watermarked on each page as “Retracted”.

Cancer Management and Research

Publish your work in this journal

Cancer Management and Research is an international, peer-reviewed open access journal focusing on cancer research and the optimal use of preventative and integrated treatment interventions to achieve improved outcomes, enhanced survival and quality of life for the cancer patient. Submit your manuscript here: https://www.dovepress.com/cancer-management-and-research-journal

The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit http://www.dovepress.com/testimonials.php to read real quotes from published authors.
