Simultaneous Overexpression of miR-126 and miR-34a Induces a Superior Antitumor Efficacy in Pancreatic Adenocarcinoma [Retraction]

The Editor-in-Chief and Publisher of OncoTargets and Therapy wish to retract the published article.

Concerns were raised to the Editor-in-Chief regarding the possibility of some image manipulation in the published article. The alleged manipulation relates to Figure 2A AdCEAp-EGFP Panc-1 and AdCEAp-EGFP BxPC3. It appears the same image had been used in both panels but with the fluorescence intensity altered.

The authors were asked for an explanation but were unable to provide a satisfactory explanation for the duplicated images and could not clearly account for the altered fluorescence intensity.

The Editor-in-Chief raised doubts about the validity of the results and determined that simply replacing the images in question not been adequately justified by the authors.

The authors wish to apologise for the error.

Our decision-making was informed by our policy on publishing ethics and integrity and the COPE guidelines on retraction.

The retracted article will remain online to maintain the scholarly record, but it will be digitally watermarked on each page as “Retracted”.

The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit http://www.dovepress.com/testimonials.php to read real quotes from published authors.
