

Long Noncoding RNA *ZFPM2-AS1* Enhances the Malignancy of Cervical Cancer by Functioning as a Molecular Sponge of microRNA-511-3p and Consequently Increasing *FGFR2* Expression [Retraction]

Dai J, Wei R, Zhang P, Liu P. Long noncoding RNA *ZFPM2-AS1* enhances the malignancy of cervical cancer by functioning as a molecular sponge of microRNA-511-3p and consequently increasing *FGFR2* expression. *Cancer Manag Res.* 2020;12:567–580.

The Editor-in-Chief and Publisher of *Cancer Management and Research* wish to retract the published article.

Concerns were raised that the published article may contain examples of image manipulation, which included the duplication of Figure 2F, column si-NC. The authors provided replacement images for Figure 2F but when asked to verify other data they were unable to provide any raw data

relating to the Western blots corresponding to Figures 5D, 6B, 6F, and 7E. As the authors were unable to provide the original raw data the editor agreed the findings of the study were no longer valid and advised for the article to be retracted.

Our decision-making was informed by our policy on publishing ethics and integrity and the COPE guidelines on retraction.

The retracted article will remain online to maintain the scholarly record, but it will be digitally watermarked on each page as “Retracted”.

Publish your work in this journal

Cancer Management and Research is an international, peer-reviewed open access journal focusing on cancer research and the optimal use of preventative and integrated treatment interventions to achieve improved outcomes, enhanced survival and quality of life for the cancer patient.

Submit your manuscript here: <https://www.dovepress.com/cancer-management-and-research-journal>

The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
