The Prognostic Values of Neutrophil-to-Lymphocyte Ratio and Platelet-to-Lymphocyte Ratio at Baseline in Predicting the In-Hospital Mortality in Black African Patients with Advanced Hepatocellular Carcinoma in Palliative Treatment: A Comparative Cohort Study [Erratum]

Page 126, Prediction of Overall Mortality and Determination of Cutoff Values section, 4th sentence, “Running the macro proposed by Mandrekar et al²⁸ indicated that the best cutoffs that predicted mortality were 2.5 for NLR (C-index=0.756, p=0.04), 92 for PLR (C-index=0.664, p=0.01), and 16.5 for the MELD score (C-index=0.678, p=0.003 (Table 2)).” should read “Running the macro proposed by Mandrekar et al²¹ indicated that the best cutoffs that predicted mortality were 2.5 for NLR (C-index=0.756, p=0.04), 92 for PLR (C-index=0.664, p=0.01), and 16.5 for the MELD score (C-index=0.678, p=0.003 (Table 2)).”
