CORRIGENDUM

The average IOP had decreased by 3.9 mmHg (17.4%) after four (n = 78) and by 4.2 mmHg (18.4%) after 12 (n = 71) weeks of combined travoprost and brinzolamide therapy when compared with the monotherapy baseline of travoprost ophthalmic solution 0.004%. After four weeks of adjunctive treatment, 56% of patients (n = 78) and 63% of patients after 12 weeks (n = 71) had at least an additional 15% reduction in IOP.
