Life-Space Mobility in the Elderly: Current Perspectives [Corrigendum]

Page 1666, Introduction, left column, fourth paragraph, the text “The Life-Space at Home (LSH), published in 2013 by Hashidate et al,9 providing a measure of mobility among outpatient ophthalmology patients, was created by physical therapists who sought to obtain more detail about the distances traveled by their homebound patients.9” should read “The Life-Space at Home (LSH), published in 2013 by Hashidate et al,9 was developed to study life-space mobility at home among older adults with difficulty performing outdoor activities. Life-space mobility was assessed at home by asking participants about distance and frequency of moving from a bedroom to four destinations (entrance, dining room, bathroom, toilet) in the prior week of the assessment”.
